

PSC Series ProSpread® commercial apron box spreaders. This option gives operators the ability to spread at low rates with the most accurate material placement of any spreader in its class.

The AccuSpread spinner discharge provides the widest and most uniform spread pattern with its twin spinner discs, each fitted with three shear bolt-secured, replaceable paddles. A heavy-duty metering gate gives operators the ability to spread nutrient-dense materials at low rates to take best advantage of the nutrient value. Rugged horizontal beaters, with cast teeth, maintain excellent durability and provide efficient material breakup, for consistent spreading of dry, flowable materials up to a 60-foot spread width.

A swing-out rear door offers a secure enclosure for the discharge system and is equipped with an adjustable lower deflector to direct the flow of material onto the spinner discs. An optional headland deflector provides simple, easy control of spreading width.

The AccuSpread spinner discharge is one of three beater options available on the PSC Series that includes truck and trailer models with capacities of 610, 710 and 810 heaped cubic feet.

**REFUELING BIBS PROVIDE PROACTIVE SPILL RESPONSE SOLUTION**

Offering users a convenient way to protect equipment surfaces and the environment, the patented Chadd Padd fuel bibs quickly absorb diesel, gasoline and oil spills at their source. As a multi-purpose spill response solution, these reusable mats catch and contain fuel before it becomes a problem, preventing fines and clean-up costs.

Ideal for industrial, construction and agriculture applications, the effective Chadd Padd mats are made out of the same material necessary for Spill Prevention, Control and Countermeasure (SPCC) requirements. Offered in two sizes, the 10" x 10" can hold up to 4.5 oz. of petroleum products and comes in rolls of 36 or 6-packs, while the 15" x 20" can absorb up to 11 oz. and is available in boxes of 18. Perforated, partial holes accommodate most filler ports for refueling or adding oil.

Anti-static treated, the Chadd Padd is made from clean, soft and absorbent polymers. It can be used multiple times for a variety of applications, such as a drip mat or when working with hydraulic fluid. It's even disposable, in accordance with applicable regulations.

The Chadd Padd costs just \$9.95 for a convenient 6-pack, while a roll of 36 10" x 10" pads, which fits neatly in a Chadd Padd dispenser, is \$34.95. Enter promo code EZFUEL8 at [www.chaddpadd.com](http://www.chaddpadd.com) to save 10%. Wholesale rates, dispensers and other accessories are also available.

**New residual corn herbicide from Bayer CropScience**

Corn growers have a new choice for post-emergent, broad-spectrum, residual weed control in Roundup® Ready and LibertyLink® corn with the registration of new Vios™ G3 herbicide.

Vios G3 provides three modes of action when tank mixed with your choice of glyphosate or Liberty®. Each active ingredient works on both grasses and broadleaf weeds, making it the ultimate choice for resistance management. Vios
